OPERATION PACIFIC SHEILD (OPS) QUICKSTART GUIDE

Combined Force Air Component Commander (CFACC)

1. OPS execution will begin with a full review of the appropriate Operation & Execution Order (OPORD & EXORD) or Fragmentary Order (FRAGORD).

2. Political Assessment
    a. Prior to the beginning of each OPS execution block, view the Base Access and Overflight.

3. Aircraft Apportionment
    a. Beginning of each OPS execution block to determine CFACC's apportionment of air mobility assets
    b. When allocated to an AEW, the mobility aircraft will start at that AEW's MOB.
    c. CFACC will analyze AEW/CCs requests, prioritize airlift requirements, and allocate aircraft to AEW/CCs in a manner that maximizes CJTF effectiveness and accomplishment of mission objectives.

4. Mobility Aircraft Operation
    a. CAOC will verify aircraft flight plans, station workload limitations, and airfield MOG. After a flight plan is verified, the CAOC will issue a PPR for each planned landing.

5. USTRANSCOM Mission
    a. What does USTRANCOM do for you?

6. Commodities Counters
    a. What does Sealift do for you?

7. Brief last 15 minutes of Planning Phase.
    a. Allows any RFI to be answered that you may have missed.
    b. Allow your MOBs to have time to brief their instructor.

8. Prepare for execution

OPERATION PACIFIC SHEILD QUICKSTART GUIDE

Air Expeditionary Wing Commander (AEW/CC) (MOB)

1. OPS execution will begin with a full review of the appropriate Operation & Execution Order (OPORD & EXORD) or Fragmentary Order (FRAGORD).

2. Political Assessment
    a. Prior to the beginning of each OPS execution block, view the Base Access and Overflight.

3. AEW/CCs select airfields to assess or build capabilities - Forward Operating Sites (FOS).
    a. Determine which airfields are suitable to achieve mission objectives, given fighter aircraft range and political limitations.
    b. Ask Request for Information (RFIs)
    c. Determine Airfield Requirements

4. Forward Operating Sites (FOS)
    a. Plan for what resources you need to get your FOS operational.
        i. What, how, and when you need your resources.
        ii. Provide loadout and Air Mobility you need to AEW/CCs

5. Mobility Aircraft Allocation
    a. The CFACC will then determine the most effective allocation of mobility aircraft to achieve CJTF objectives.
        i. Request what you can use and what will help accomplish the mission.

6. Develop Load Plans.

    a. AEW/CC will complete flight plans for allocated mobility aircraft, including starting airfield (or hex number if the aircraft starts the turn in route), in route download location (if required), destination (or hex number if the aircraft ends the turn in route), intent at the final destination, alternate airfield, and declaration of intent to play a Risk Card.

7. Generate Fighter Sorties

    a. One fuel, one bomb, one missile, one fuel token AND fighter brought to CAOC for execution.

8. Brief last 15 minutes of Planning Phase.
    a. Allows any RFI to be answered that you may have missed.

9. Prepare for execution
